

Pharmaceutical manufacturing unit on a 10000 sqm site

Close to Paris

Small, but technologically advanced, pharmaceutical manufacturing unit (around 30 people) located 60 Km from Paris.

The original facility dates from 1977 and comprises 2.035 sqm of well-maintained industrial buildings and office space built on a 10.000 sqm site.

The facility includes production and laboratory equipment designed for the manufacture of pellet-based (around 300 millions caps) and microencapsulated (around 60 tons) pharmaceutical products in bulk (capsules, pellets and microcapsules). On a two shift basis / 5 day per week, utilisation rate is presently around 50% (pellets), 75% (microencapsulation) and 65% (capsule filling).

The plant is in compliance with GMP and environmental regulations.

To succeed in this project, our client is hence willing to offer a long term supply agreement over period of 3/5 years for existing products currently manufactured in site. Under certain circumstances, the supply agreement could be expanded over the given period. The buyer(s) is expected to bring in additional volumes in the future and to develop its own activities along the term of the contract.

Completion of the site take-over is expected to be made by mid-year 2010.

16 rue Vivienne
75002 PARIS
